

AI Usage Log

Project context

AI was used as an analytical support tool for the Olist Brazilian E-Commerce project. Existing SQL, statistical analysis, and Power BI findings were used as the evidence base.

Analytical lens

Customer Retention & Loyalty Analyst.

AI uses

- Interpret existing statistical findings in business language.
- Generate alternative interpretations and counter-analysis questions.
- Refine data-driven recommendations.
- Support executive summary and storytelling preparation.

Evidence used

- One-Time customers: 93,099 (96.8812%).
- Repeat customers: 2,997 (3.1188%).
- Average order revenue: 137.7541; median: 86.9000.
- Average delivery delay: -11.8769 days.
- Average review score: 4.0864.
- Price-freight Pearson correlation: 0.4142.
- Revenue outlier percentage: 7.9575%.

Validation principle

AI-generated interpretations were treated as hypotheses or communication aids. Claims were retained only when supported by SQL, statistical, or Power BI evidence.

Limitation

The statistical report does not provide the numerical Mann–Whitney U statistic or p-value, so no claim of statistical significance is made for that test.
